

ABSTRACT OF THE DISCLOSURE

The invention can provide an image processor, an image processing method and a program capable of reducing an oddness of appearance when plural images of different color tones photographed in different conditions, etc. are arranged on the same page. The image processor can unify the color tones of plural correcting object images, and is characterized in that a reference color which is a representative color of the correcting object image is set for every correcting object image, and the color tone of a partial area or an entire area of the correcting object image is corrected so as to conform the reference color for every correcting object image.
